

Second Brain

How I manage context for AI — a folder, not a product.

The idea

Your brain is for having ideas, not holding them.

TIAGO FORTE · BUILDING A SECOND BRAIN

A **structured external memory** — in the AI era, a **persistent context source** that agents can read, reference, and write back to.

How it works

STABLE LAYER

Who you are

role · business · tone · clients · standards

DYNAMIC LAYER

What's happening now

active projects · priorities · logs · decisions

Bidirectional. The AI reads context *and writes back* — new decisions, new facts, new state. The system grows with every session.

 Just a folder with Markdown files.
